

## **Resolution No. 609**

### **PTSD AND MENTAL HEALTH CARE**

WHEREAS, the Department of Veterans Affairs (VA) has indicated that treating Post Traumatic Stress Disorder (PTSD) and providing Mental Health Care among returning war veterans is one of its highest priorities, and the VA operates a nationwide network of nearly 200 specialized PTSD outpatient treatment programs; and

WHEREAS, the early and accurate screening, diagnosis and treatment for PTSD, depression, substance use, and other mental health disorders, yields optimal patient outcomes, and statistics have shown that these conditions, left untreated or poorly treated, can lead to increases in suicide attempts or death by suicide among a host of other negative consequences; and

WHEREAS, a total of 405,915 Iraq, and Afghanistan Veterans were seen for potential PTSD at VA facilities following their return from these overseas deployments as of March 31, 2015; and

WHEREAS, VA expects an increase in PTSD conditions as Veterans return from Iraq and Afghanistan after multiple tours of duty; and

WHEREAS, available research has not sufficiently evaluated the clinical effectiveness of treatment programs for veterans diagnosed with and/or suffering from the effects of traumatic brain injuries, PTSD, or other mental health conditions, and adequate research into the brain's response to internal and external influences that could result in mental illness has yet to be undertaken; now, therefore

BE IT RESOLVED, by the Veterans of Foreign Wars of the United States, that we strongly urge the Department of Veterans Affairs to continue to adequately staff VA mental health treatment and research programs; and

BE IT FURTHER RESOLVED, that we urge Congress to dedicate adequate resources to address the alarming rate at which Veterans commit suicide.
