

Resolution No. 615

TINNITUS AND HEARING LOSS PRESUMPTIVE SERVICE CONNECTION

WHEREAS, veterans of the armed services who served in combat or in a position (e.g., member of a gun crew on board Navy ships) or certain occupational specialties have a high incidence rate of hearing loss or tinnitus as a direct result of acoustic trauma; and

WHEREAS, veterans, from earlier, were not afforded a comprehensive audiological examination upon entrance and discharge from the military services, but instead were subject to highly inaccurate test methods; and

WHEREAS, in recent years the second leading disability granted service connection by VA was for hearing loss or tinnitus; and

WHEREAS, in 2005 the Institutes of Medicine (IOM) (now referred to as the National Academy of Sciences) released a study that showed that nearly all service members are exposed to acoustic trauma at some point during their military service and that many experience hearing loss and/or tinnitus as a result, often years after service. However, “after the fact, hearing loss or tinnitus incurred as a result of military service cannot be distinguished with certainty from subsequent noise-induced hearing loss...” Given these findings, reasonable doubt must be resolved in favor of veterans who suffered acoustic trauma in service; now, therefore

BE IT RESOLVED, by the Veterans of Foreign Wars of the United States, we urge Congress and the Secretary of Veterans Affairs to grant service connection on a presumptive basis for any veteran diagnosed after discharge with hearing loss or tinnitus when the evidence shows that the veteran participated in combat or worked in a position or occupational specialty likely to cause acoustic trauma.
